Introducing Almond Robotics

Who are we?

We are Almond Robotics, a community robotics team made up of 5 passionate high school students based in Potomac, Maryland. We participate in a competition known as FIRST Tech Challenge, where we design, build, and test a robot in order to participate in this year's competition, known as "Skystone." As an organization, FIRST strives to inspire young students to become more involved in STEM through its multiple programs.

Our Core Values

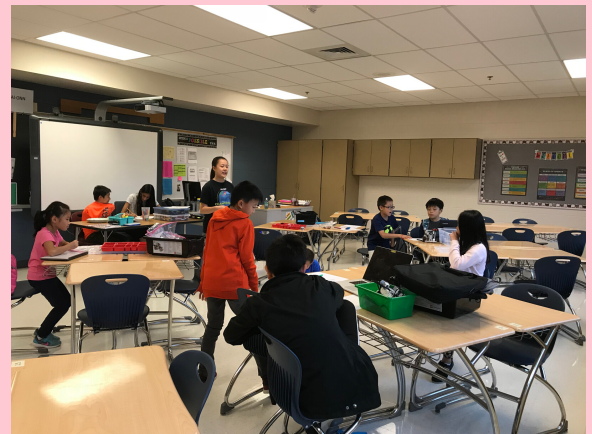

1. Inspire a lifelong passion for STEM

We provide many opportunities for students to explore the world of STEM and robotics through lots of outreach which includes teaching robotics classes, providing low cost robotic kits, hosting stem workshops/events.

2. Bring FIRST into the mainstream

We want to impact our community the same way FIRST impacted us. That is why we spend countless hours every week teaching robotic classes, coaching FLL/FLL Jr teams and organizing countywide events such as MocoHacks.

3. To "Go Nuts for Innovation!"

Our team has invented a low-cost robotics kits meant to introduce robotics to underprivileged communities. We have distributed **600+** kits through **5** large events.

Why Sponsor Us?

1. Help us go to the **World Championships**

Recently, we were able to qualify for the First Tech Challenge World Championships along with one other team in our state. We have spent several years working very hard to be able to get to this position. We need as much support we can get as the total fee amounts to around \$5000.

2. Increase **brand awareness**

As a sponsor, we can advertise your brand in a variety of ways. You will get chance to be marketed on much of our branding which includes our website, T-shirts, robot, and social media platforms. Getting the chance to have your company advertised at such a huge event like the World Championships is an opportunity that can't be missed.

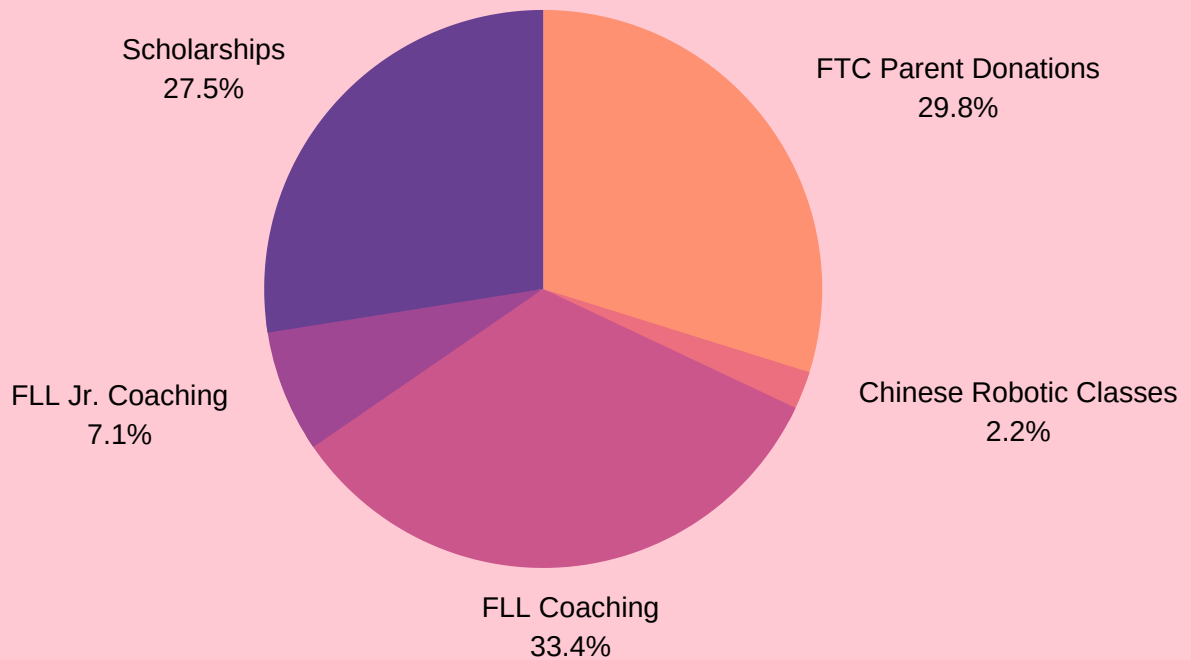

3. Help us fund **outreach projects** such as **"Hello Robot"**

Throughout the years, we have lead many outreach projects including our most successful one, "Hello Robot", which is a low-cost robotics kit meant to introduce robotics to underprivileged communities. We have sold over 600 kits to communities throughout the DMV. Donations will also go to funding materials for our robotics classes/workshops/events.

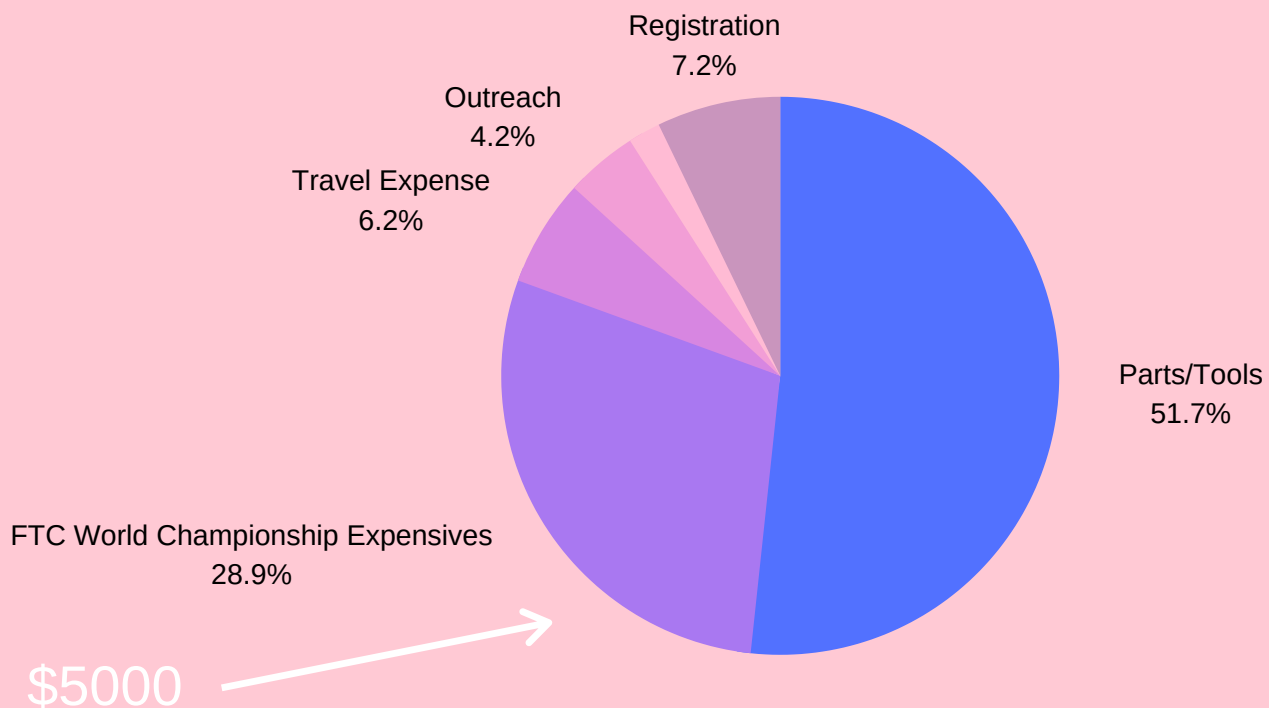

Current Budget

2019-2020 Season Income: \$12,058.96

(\$3000 Reserved Requirement Fee already deducted)

2019-2020 Season Predicted Expenses: \$17,367.74
